EDUCATION

Milliken Mills High School

Grade 10 Student

Markham, ON

Sept. 2024 – June 2028

EXPERIENCE

Core Programmer (VEX Robotics Team)

Milliken Mills High School Robotics

Sept. 2023 – Present

Markham, ON

- Programmed competition robots in C++ using the VEX V5 API
- Implemented PID control systems for accurate driving, turning, and autonomous navigation
- Designed autonomous routines utilizing sensors including inertial, optical, and distance sensors
- Worked with mechanical and electrical team members to tune drivetrain and optimize performance
- Debugged real-time issues during competitions under strict time constraints

Full-Stack Developer

Glowly Mental Health Platform

Jan. 2025 – Present

Remote

- Developed a web platform to connect users with mental health resources and communities
- Built backend services using Django and integrated OpenAI APIs for AI-powered search and chat assistance
- Created responsive frontend interfaces using React and Vite
- Implemented user authentication, moderation tools, and database systems

Mod Developer

Minecraft Modding Projects

June 2024 – Present

Remote

- Developed Fabric and Spigot plugins in Java for Minecraft 1.21
- Created custom gameplay mechanics, abilities, and scaling health systems inspired by Marvel Rivals
- Used mixins and event systems to modify base game behavior without altering source files
- Debugged multiplayer synchronization and performance issues

PROJECTS

Ralph (AI Guide Dog) | Python, Raspberry Pi, Computer Vision, OpenCV

2025

- Built an AI-powered assistive navigation device designed to function as a low-cost alternative to guide dogs
- Implemented real-time obstacle detection and path guidance using computer vision
- Integrated camera input with on-device processing using a Raspberry Pi
- Designed auditory feedback system to communicate navigation instructions to the user

Machinalytics | Python, Data Analysis, Machine Learning

2025

- Created a data analytics and machine learning visualizer supporting drag-and-drop dataset input
- Automatically parsed datasets and generated statistical summaries and visualizations
- Implemented regression and classification models for predictive analysis
- Provided users with visual graphs to better understand trends and patterns in data

TECHNICAL SKILLS

Languages: Python, HTML, CSS, JavaScript, TypeScript, Java, C++, SQL, Skript

Frameworks: React, Django, Flask, FastAPI, Node.js, Fabric API, Spigot API

Developer Tools: Git, GitHub, Docker, Linux, VS Code, IntelliJ, PyCharm, Gradle, Maven, npm, Vite

Libraries: pygame, OpenCV, NumPy, TensorFlow, scikit-learn, Discord.py
